NOVAH

Individual Demand Under the overall budget

Industrial design

Environment-frie

Satisfy everyone's independent demands

A staff chair that provides best experience for everyone must be available in multiple sizes unless you're satisfied with its seat depth adjustment function and armrest. Considering different body sizes, a chair must be flexible enough to suit everyone's body form.

Ergonomic

Control Experience

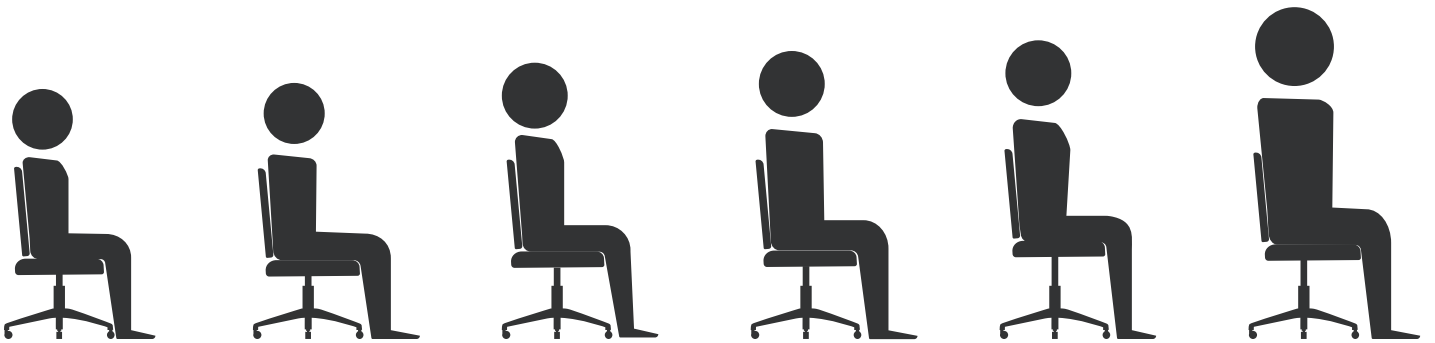

A neglected dimension

Are the office chairs comfortable? The key to this issue is who will use this chair. During the development of the staff chair, a dimension - the seat depth, has been overlooked. The number of staff chairs accounts for about 80% of the number of chairs in the entire office space, so they must be comfortable and user-friendly.

Depth makes difference

The seat depth and thigh length determine whether the user's waist can be supported by the back. Although the fixed seat depth can satisfy the requirements of most users, there are still more than 24% of women and some men need to buy additional lumbar support. Configured with adjustable seat depth, Yoko shortens the difference in body size by 60mm, ensuring that the waist of most users gets support. It is more ergonomic.

yoko

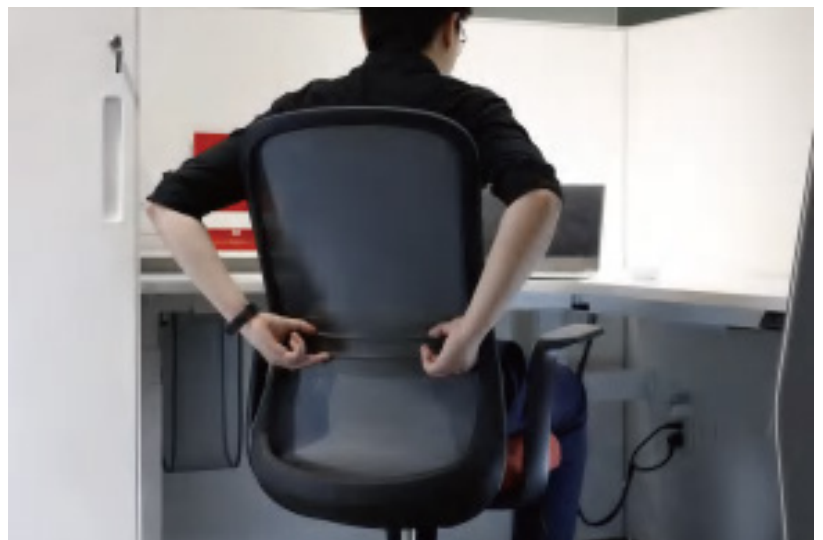

Human beings

Common

Backrest easy to catch

Yoko has lumbar support and self-gravity chassis. Usually only the chairs of executive staffs have such configurations, which can well protect the users' waist, back and spines. Besides, it's beautiful and elegant in shape.

A person is leaning back in a white ergonomic office chair at a desk. The person is wearing a blue and white checkered shirt. On the desk, there is a silver laptop, a blue pen holder with several pens, and a blue mouse. The background is a bright, out-of-focus office environment.

Keyless Control

Self-gravity titling function provides deep support for lunch break. In the past, only high-end ergonomic chairs have this function. The user leans back and naps at a large angle, saving the trouble of getting up and adjusting the mechanism. Complicated control is not required for experience.

Nearly 0 Emission 100% Guarantee

The seat case of most low-end office chairs is made with plywood. During use, the adhesive will produce formaldehyde, toluene and other gases harmful to humans and the environment. Yoko is responsible for the health of users by manufacturing the seat case with engineering plastics that are free from adhesives, so it won't produce harmful gases.

Durability

beyond imagination

PA engineering plastic case offers better stability and durability and lasts longer than you think when it is compared to wooden case.

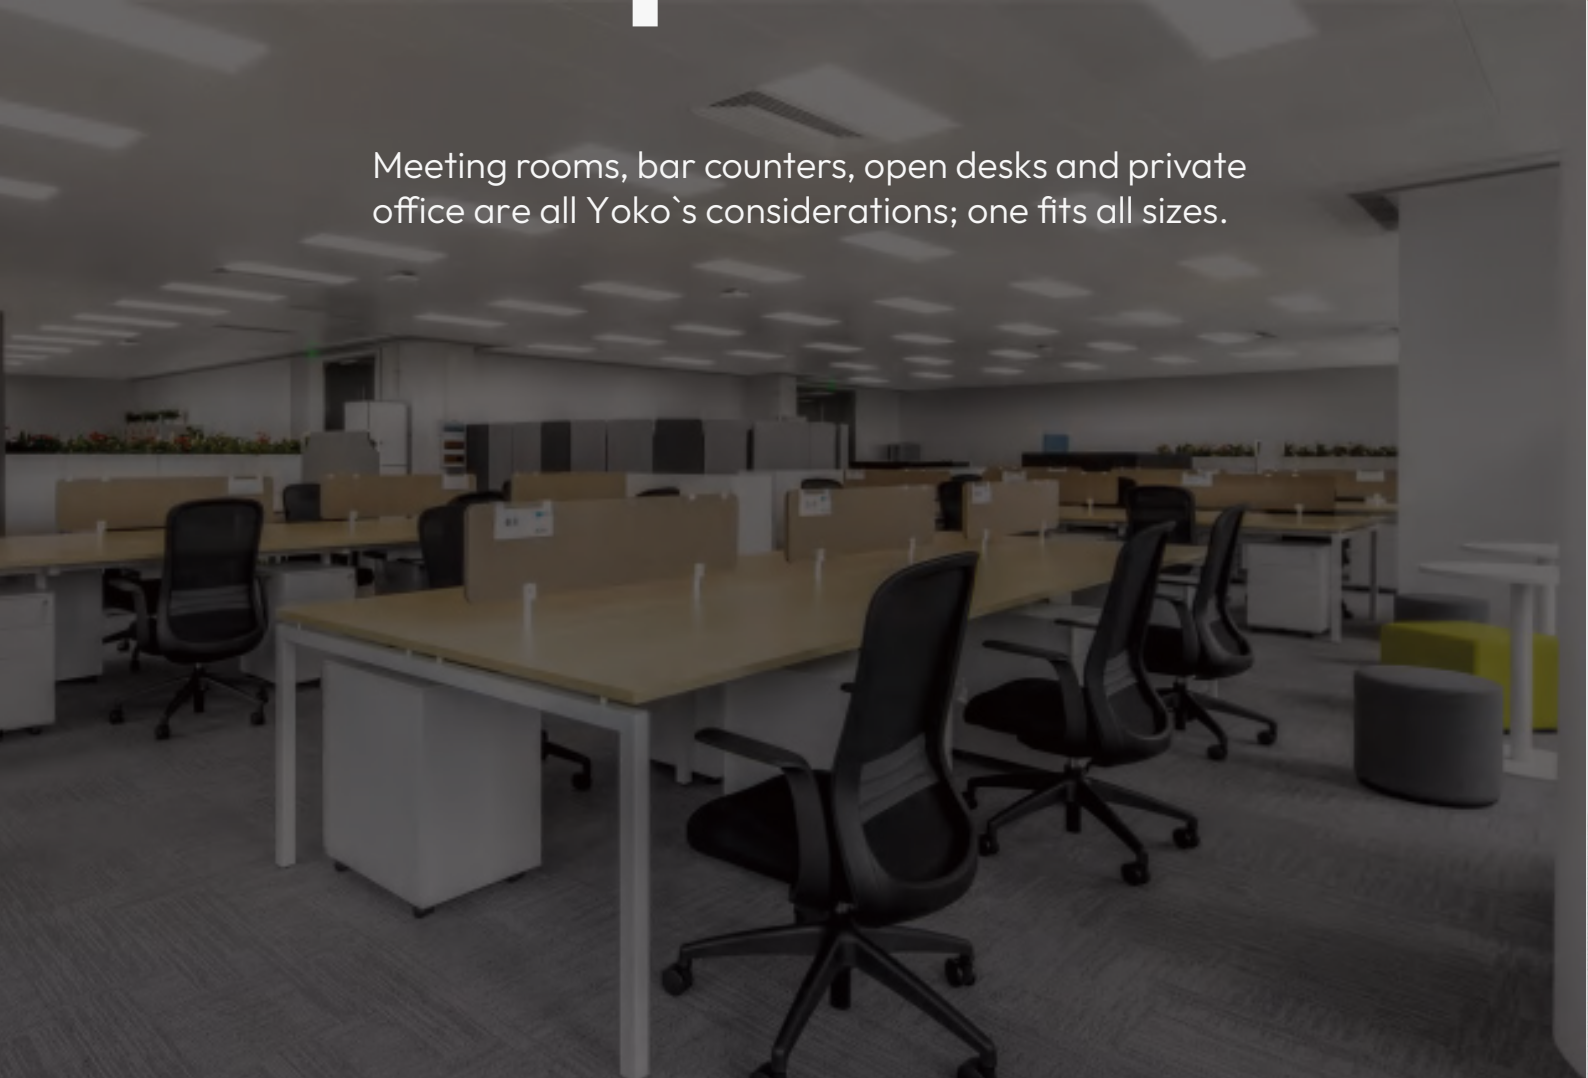

One design Fits all

Yoko makes you feel comfortable. It has diverse design styles, so Yoko can satisfy the employees' requirements in open office spaces and is suitable for administrative spaces.

Match Various Spaces

Meeting rooms, bar counters, open desks and private office are all Yoko's considerations; one fits all sizes.

Fit varied people

Fit all people: It may satisfy you at all situations, including work, discussion and meeting, either secretaries or bodybuilders are very satisfied with “1”.

Arc Headrest Adjustment

Relieve the Tension of Neck

Self-gravity titling function provides deep support for lunch break. In the past, only high-end ergonomic chairs have this function. The user leans back and naps at a large angle, saving the trouble of getting up and adjusting the mechanism. Complicated control is not required for experience.

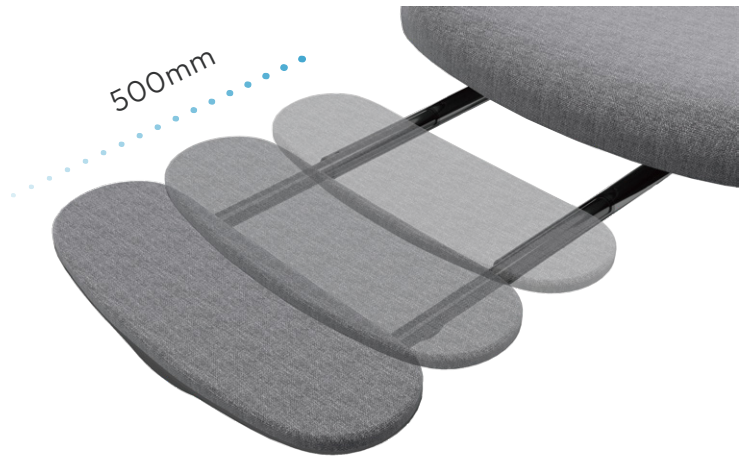

Good for relieving fatigue,
higher comfort level for
to lie down during lunch
break

you

Triple-section telescopic structure with the telescoping range of 0 to 500mm.

Curve everywhere

Yoko's design is avant-garde and adopts unified style. The full-curved armrest looks like the joystick of Boeing aircraft, and the obvious business style matches well with the meeting room and reception room.

Certified Color&Material &Finishing

In order to maximize user experience, Yoko has carried out a lot of repeated surveys and experiments regarding its color, material, manufacturing process, etc, and won the finalist certificate of international CMF Design Conference.
